Sebastian David Jaramillo Montaña FSLM-work

Data-sheet: https://github.com/SebasJar4/FSLM-net/blob/main/dataSheet.xlsx

Archivos de configuración: https://github.com/SebasJar4/FSLM-net/tree/main/conf_txt

¿Qué se hizo?

Se configuraron los routers (5 en total), los Sw (5 en total) y los pcs (10 en total), a los router y a los sw se les agrego hostname cisco con privilegios 15 y un secret 123, username, console 0, vty 0 4 con entrada por telnet, se agrego la configuración de la ip estatica en cada router por ip de llegada y se con figuraron las interfaces como gateways terminados en .1 a cada sub-net. A los pc se les asigno el gateway segun cada interfaz del router y su ip estatica en .10.
